## Disabled Persons Equipment & Services.

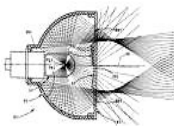

# Drive easy with an RB – SPINNER

...”the world’s most user-friendly driving aid”

- Easy Joystick activation – 10x functions
- Only modest phalangeal dexterity required
- Ergonomically designed for comfort
- Exclusive ‘Smart Unstop’ intelligence
- Battery-save sleep mode and low battery alert

## Exclusive to Signaller – Programmable Signal de-activation with ‘Smart Unstop’

Advanced software offers manual or automatic signal de-activation.

Whilst signals can cancel manually at any time via the joystick, the time period for automatic signal cancellation is programmable from 10-60 seconds to suit each individuals preference and driving environ – ie Rural/Suburban/City/Heavy Traffic etc. – Ideal when changing lanes. In addition to this, Signaller’s intelligent “**Smart Unstop**” feature prevents premature cancellation while the brake is applied. This is necessary during city driving while sitting at traffic lights etc. Once the brake is released, Signaller’s timer again automatically engages.

## Multi-Function Interface – Multiple Keypad options – from any location!

“...Driving functions become second nature in almost no time at all”

Programmable Auto or Manual lights activation (*plus high/low beam switching*); Automatic cancelling signals; Flash-Passing Beam; Horn; Window washer; Hazard lights; Window Wipers (*Intermittent, Low and High speed*).

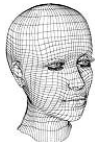

**SPINNER** The quick release 10x function RB-Spinner requires only modest phalangeal agility. It’s unique multi-directional joystick makes light work of driving – and ideal for large fingered clients with poor phalangeal dexterity.

**HAND CONTROL** The RB-HC activates 10x functions from only SIX large buttons. Backlit for night viewing, the HC Hand Control level Keypad is hard-wired to the vehicles power source meaning no batteries are required.

**REMOTE CONTROL** The free standing RF Remote will activate 10x functions from only FIVE large buttons. If fitted to an existing Spinner Knob with it’s special mounting bracket, the Remote will maintain the same finger-button alignment throughout the turn. This free-standing Remote Control is suitable for a multitude of applications.

**CUSTOM SWITCHES** Signaller will obey commands from any switch connected to it’s interface to accommodate headrest activation, HC bump-buttons or any other switch location. This feature will operate in unison (if required) with any keypad option.

With Signaller installed the driver retains full control of the vehicle whilst safely activating any desired electrical function – 100% of the time – even while negotiating round-a-bouts.
